PHYSICAL INVENTORY VERIFICATIONS

What is Physical inventory verification?

A physical inventory verification can be a critical step in ensuring that all the assets of a business are accounted for and properly recorded.

By conducting a thorough physical inventory, businesses can ensure that they are accurately tracking assets and liabilities, and that any discrepancies are identified and corrected as soon as possible.

Why its important to a businesses?

*to ensure that it is done correctly in order to avoid any inaccuracies or errors.

*ensure the records are accurate and up to date, and any discrepancies are immediately identified and corrected

TRACEABILITY

Traceability is the ability to track the history of an object, from the point of manufacture to the point of use.

Traceability systems can be used in a variety of industries, including food production, manufacturing, and healthcare. They can be implemented in a variety of ways, including databases, software, and hardware.

Traceability system uses barcodes and RFID tags to track and trace products. Barcodes are used to track products at the point of manufacture, while RFID tags are used to track products in the supply chain
